

Privacy Policy for Axiom Tweet Interceptor

Effective Date: May 2, 2024

This privacy policy governs your use of the software application **Axiom Tweet Interceptor** (“Application”). The Application is a Chrome extension that intercepts tweet links on **axiom.trade** and displays them in a custom popup. The popup contains a form with token data that will be deployed to the Solana blockchain. The Application also requires Google OAuth2 authorization to enable backend requests, where deployment occurs.

1. User Provided Information

The Application does not require direct registration. However, you may be asked to sign in with **Google OAuth2** to authorize backend operations. This authorization provides limited account access necessary only for backend request authentication.

We do not request or store personally identifiable information (such as your name, address, phone number, or email address) beyond what is required for authentication.

2. Automatically Collected Information

The Application itself does not collect data such as IP address, browser information, or usage statistics. Intercepted tweet links are processed only within the user’s browser and are not transmitted to third parties beyond the backend deployment service described below.

3. Use of Blockchain Data

When you use the Application to create token data, the information you enter may be submitted to the **Solana blockchain**. Blockchain transactions are public, permanent, and cannot be deleted. Please ensure you do not include sensitive personal data in token metadata.

4. Location Information

The Application does not collect or use precise device location data.

5. Third-party Access to Information

- **Google OAuth2:** Used only to authorize backend requests required for deployment actions.

- **Solana blockchain:** Deployment data (as part of token creation) is published publicly on-chain.

No other third parties receive or process personal information through the Application.

6. Data Retention Policy

- **OAuth2 authorization tokens** are used only for session-based backend requests. They are not stored beyond their validity period.
- **Blockchain data** is retained permanently on Solana, as it is outside our control once deployed.

7. Children's Privacy

This Application is not directed to children under 13, and it does not knowingly collect personal data from them. If we discover data associated with a child under 13, it will not be retained.

8. Security

We implement reasonable security measures to protect data handled during authorization and backend operations. However, transactions on the Solana blockchain are public and immutable. No method of transmission over the internet is 100% secure.

9. Changes to This Privacy Policy

This Privacy Policy may be updated from time to time. Updates will be posted here, and users are encouraged to review the policy periodically.

10. Your Consent

By using the Application, you consent to:

- The use of **Google OAuth2** for authorization.
- The deployment of token-related data to the **Solana blockchain**.

11. Contact Us

If you have questions regarding privacy or the Application's practices, please contact us at:
